Aliaksandr Bullo

Senior Frontend Engineer · React / Next.js / TypeScript

Email: bulloalexander77@gmail.com Telegram: @AlexanderBullo GitHub: github.com/Boolick
Hanoi, Vietnam (UTC+7) · remote

PROFILE

Frontend engineer focused on **React, Next.js and TypeScript**: I design client-side architecture (**FSD**), build real-time WebSocket interfaces, optimize SSR and Core Web Vitals, and migrate legacy code to strict typing. I write automated tests (**Vitest, Playwright, Jest/RTL**), set up CI/CD, and run code reviews and developer onboarding. Comfortable working alongside backend (**Node.js, NestJS, PostgreSQL, Redis, Docker**) and design teams. Before moving into software I spent 11 years as an industrial engineer leading people and processes, so I'm used to owning outcomes.

KEY SKILLS

Frontend	React 18/19 (hooks, SSR/CSR), Next.js 14–16 (App Router, Server Actions, SSG/ISR), TypeScript, JavaScript ES6+, Vite
UI & Styling	Tailwind CSS, Radix UI, Framer Motion, SCSS, design systems, responsive layouts
State & Data	TanStack Query, Redux Toolkit / RTK Query, Zustand, WebSockets, Supabase Realtime, Zod
Architecture	Feature-Sliced Design, modular architecture, SOLID, code review, Git Flow
Performance	Core Web Vitals (LCP), code splitting, lazy loading, SSR and image optimization, SEO
Testing	Playwright (E2E), Vitest, Jest, React Testing Library
Node.js & Backend	Node.js, NestJS, FastAPI (Python), PostgreSQL, Redis, REST APIs
CI/CD & Infra	GitHub Actions, GitLab CI, Docker / Docker Compose, Nginx, VPS, Vercel
AI tooling	Claude Code, Cursor, MCP — task decomposition, test generation, review

EXPERIENCE

DKMline — B2B E-commerce Platform

Apr 2026 — Present

Fullstack & Product Engineer (Contract) · Remote

B2B platform and catalog for an industrial packaging manufacturer: frontend, CMS, SEO, deployment

- Built the platform on **Next.js App Router** (SSR, Server Actions) with Payload CMS and PostgreSQL; data validation with Zod.
- Cut **LCP from 2.8s to 1.8s** via image optimization, lazy loading and server rendering; shipped SEO infrastructure (sitemap, robots, Schema.org).
- Configured **Redis** caching for catalog data to reduce database load; containerized the stack with Docker Compose and deployed to a VPS.
- Replaced offline order intake with a digital funnel and Telegram Bot API notifications.

Stack: Next.js, React, TypeScript, Tailwind CSS, Payload CMS, PostgreSQL, Redis, Docker, Zod

DEXSA — Telegram Mini App & Social Platform

Jun 2025 — Apr 2026

Fullstack / Frontend Developer (React / Next.js) · Remote

Startup: Telegram Mini App, payment flows, real-time data, notification service

- Built the client architecture on **React and FSD**: isolated modules, server cache (TanStack Query) separated from UI state (Zustand); list and table virtualization.
- Implemented the **Telegram Stars** checkout flow: transaction states, external API confirmations, retries, strict Zod payload validation.
- Integrated **Supabase Realtime** (optimistic updates, infinite queries, retry logic) so the UI updates without reloads.
- Co-designed API contracts with the backend team; wrote backend endpoints and a timezone-aware notification service (SQL, pg_cron, Telegram Bot API).
- Adapted the UI to Telegram WebViews on iOS and Android (safe areas, on-screen keyboard, streaming video); unit-tested critical business logic.

Stack: Next.js, React, TypeScript, TanStack Query, Zustand, FSD, Zod, NestJS / FastAPI, PostgreSQL (Supabase), Telegram Bot API

Tower Empire — Real-Time Multiplayer Web Platform

May 2023 — Jun 2025

Core Frontend Engineer / Architecture Owner · Remote

Core and architecture of a real-time multiplayer game platform

- Led the legacy migration from **JavaScript to TypeScript** with unified types for API and WebSocket payloads; production regression bugs dropped by 40%.

- Designed the **WebSocket layer** from scratch: event protocol, automatic reconnect with exponential backoff, heartbeats, session recovery; latency under 100ms at peak load.
- Set up the data layer with **Redux Toolkit, RTK Query and Zustand**: normalized cache, optimistic updates, no duplicate requests.
- Shipped the second game in the line (*Hire for Fun*), from frontend architecture to release.
- Built **CI/CD** (GitHub Actions, GitLab CI): linting, builds, Vitest and **Playwright E2E** on critical flows; faster Vite builds via code splitting and dynamic imports.
- Ran code reviews, task decomposition and onboarding of new developers; configured Nginx routing to the SPA router.

Stack: React, TypeScript, WebSockets, Redux Toolkit, RTK Query, Zustand, Vite, Vitest, Playwright, GitHub Actions, GitLab CI, Nginx

EDUCATION

Belarusian State Technological University (BSTU), Minsk 2006 – 2011

Process Engineer · Higher technical degree

LANGUAGES

Russian — native **English** — B2: documentation, written communication, code review
